

Pressure Tube Sliver Sampling Tool WEST 540

- West Scrapping Tool for 540 MWe (WEST 540) PHWR uses two single point carbide tip cutting tools
 - One for removal of pressure tube surface oxide layer and another to collect metal sample in an orthogonal cutting operation
- The cutting process is actuated by the PHWR Fuelling Machine
- The tool head is designed to be operated in shut down condition of the PHWR with the shutdown coolant flow maintained in the channel
